

BI HomeGuard®

Combines advanced technology and superior reliability to provide agencies with the most comprehensive curfew-based compliance monitoring tool available on the market today.

Key Features

Transmitter

- Size (transmitter only): 2.7 x 2.8 x 0.9 inches
- Weight (full assembly): 3.3 ounces
- Field-replaceable battery
- 12-month battery life
- Dual tamper detection
- Dual internal antennas

Receiver

- Landline or Cellular compatibility
- 48-hour backup battery
- Message buffer (4,800 messages)
- Non-volatile memory
- Dual internal antennas
- Variable leave window
- Variable range settings

Online Monitoring

- Designed for community corrections officers
- 24x7x365 online access
- Easy to learn and use
- View caseloads at a glance
- Enroll and delete participants
- Manage participant information
- Enter and modify participant schedules
- View alerts
- Create, view, print, and download reports

Reliable Home Curfew Monitoring

With an increasing number of offenders residing in our communities, criminal justice agencies need a dependable monitoring system to help supervise offenders effectively.

Product Overview

The BI HomeGuard® electronic monitoring system is a radio frequency system that continuously verifies the presence or absence of a client at a specific location, usually the home. HomeGuard is offered with landline or cellular connection using either Verizon® or Sprint® network. The receiver reports the client's presence/absence to the central monitoring center through the client's home phone line, which determines whether the client is adhering to or in violation of his or her authorized schedule. If the computer detects a violation, it generates an alert, and the central monitoring center sends a notification through the method(s) specified by the supervising agency or officer.

The HomeGuard system includes BI TotalAccess®, an easy-to-use, web-based application that gives agency staff the ability to access and manage information for all enrolled participants, including violation and equipment status information. By simply logging, officers have secure, 24x7x365 access and can complete various client data entry and monitoring tasks in real-time.

Flexible & Reliable Monitoring

BI designed HomeGuard with the flexibility to meet a variety of curfew monitoring requirements. Agency configurable options allow agencies to match the monitoring rules to the risk assessment of the offender. In addition to variable range settings, HomeGuard also offers a variable leave window and unlimited schedules.

The transmitter can be quickly and easily installed on the client's ankle. It has a 12-month field-replaceable battery, as well as tamper detection throughout the unit. BI's electronic dual tamper technology has been used to successfully monitor over four million offenders.

HomeGuard offers a 48-hour backup battery, message buffer, and nonvolatile memory to provide a high level of security. Monitoring services won't be disrupted due to power or phone failures. With HomeGuard, agencies have a radio frequency monitoring system that they can depend on to effectively manage offender compliance with community-based sanctions.

Industry Leading Integration and Monitoring

With more than 30 years in the industry, BI has combined knowledge and experience to provide an easy-to-use product with increased reliability and greater flexibility. Because agencies require varying levels of supervision, BI's compliance monitoring products and services can be integrated to provide a continuum of graduated sanctions matched specifically to each offender's profile.

BI also provides monitoring services for single or integrated BI compliance monitoring products through BI Monitoring Operations, BI's ISO 9001:2008 certified monitoring service center. Monitoring Operations Specialists monitor and report on client compliance with agency-specified sanctions. An agency may also choose to monitor clients using their own monitoring computer system, BI GuardServer® powered by TotalAccess. BI works closely with every customer to determine which monitoring system best meets their needs.
