

Texas HB-496

House Bill 496 has been passed by the Texas Legislature and mandates all schools to implement a Stop the Bleed program by January 1st, 2020

The law requires bleeding control training for staff and students in all school districts as well as accessible bleeding control kits.

School districts are complying with the funded mandate by placing a bleeding control kit in **EVERY** classroom and common area for quick access during lockdowns.

SouthEast Texas Regional Advisory Council (SETRAC) is a 501c3 organization helping to serve our community. Under contract with Texas Department of State Health Services, SETRAC operates the Regional Healthcare Preparedness Coalition (RHPC) within twenty-five counties of Texas. The RHPC is comprised of a network of healthcare agencies, EMS and response partners, public health officials and jurisdictional authorities.

The mission of the coalition is to protect and maintain infrastructure of all regional healthcare agencies, coordinate regional healthcare systems response, provide situational awareness, identify and allocate resources, and develop a well-trained resilient medical community.

To fulfill one of these goals, SETRAC has created Texas House Bill-496 compliant Bleeding Control kits for use in our schools. We are proud to offer our custom-made kits on a competitively solicited, publicly awarded cooperative contract through OMNIA Partners. This partnership allows school districts to meet the requirements of this funded mandate as quickly as possible.

We want our community well prepared to handle all emergencies and disasters when they arise. Therefore, we recommend that **EVERY classroom and common area** have a Bleeding Control kit for rapid access. If the school is in lock down mode a kit in the nurse's office or down the hall is not an option.

Our expert staff also provide **FREE TRAINING** to school staff in Texas when they purchase our Bleeding Control kits to ensure your staff knows exactly how to use the components in the kit when needed.

Our Bleeding Control kits are resealable, and components can be replaced as needed without having to purchase a completely new kit.

Please contact us today to ensure your school is compliant with the mandate.
