

Stay Ahead of the Curve: KBS COVID-19 Response Services

KBS has partnered with industry-leading operations to rapidly and effectively respond to the COVID-19 crisis, deploying thousands of disinfecting teams to shipping and logistics centers, pharmacies, grocery stores, senior living facilities, data centers, and other essential operations. In total, KBS has performed over 250,000 COVID-19 deep cleaning remediation operations.

When supply chains broke down during the beginning of the COVID-19 crisis, KBS resources delivered not only labor but also PPE, mission critical chemicals, and supplies at a national scale, in addition to cleaning and sanitizing services.

- > A comprehensive prevention and response maintenance plan
- > Over 250,000 COVID-19 cleanings
- > Nationwide deployment of teams
- > PPE and safety protocols to keep workers safe

Tailoring Programs for Healthy Operations

As more facilities reopen for business, KBS continues to partner with leading companies to deliver essential facility services that help customers and employees stay safe. We tailor solutions based on site-specific needs, applying our deep expertise and four levels of COVID-19 responses to maintain healthy operations.

KBS partners with clients on a national scale to deliver programs that limit the spread of harmful bacteria and viruses, and prepare for outbreaks if they do occur. The KBS science advisory board and Innovation Center have developed and supported proven, proprietary technology and protocols that drive our facility hygiene programs. KBS sets standards beyond EPA and FDA recommendations, deploying the right products for the right environments.

Preventative Maintenance

1 Adjusted Frequency of Cleaning & Disinfection

We offer tailored responses to adjust or increase frequency of cleaning and disinfection within facilities to maintain healthy operations, and help customers and employees stay safe.

Some key strategies include re-prioritizing areas within an existing scope of work and deprioritizing others, adjusting the time of day and duration of work, and introducing and safely applying EPA-registered disinfectants.

We also work with our clients to offer turnkey solutions or supplement the work of their internal teams with KBS professional cleaning teams.

2 Expanding the Scope of Cleaning

Our teams work with clients to expand the scope of service to meet demand, including high touchpoint cleaning, which is critical to maintain healthy operations. High-frequency touchpoint cleaning encompasses handrails, door handles, counter tops, light switches, elevator buttons, keyboards, telephones, restroom fixtures, hygiene barriers, and any other surface or object where the virus can exist for hours or even days. Increasing the scope of cleaning may also be combined with increased frequency of disinfectant cleaning and may include intermittent fogging and UV disinfection protocols as appropriate.

3 Deep Cleaning

KBS delivers single or periodic deep cleaning to a wide range of operations, providing customers and employees with assurance that spaces that have been closed during the crisis are ready to reopen.

Services at this level of deep cleaning often include HEPA vacuuming of all carpeted areas, machine cleaning all floor surfaces with EPA-registered disinfectant cleaning solutions, hygiene barrier cleaning, the proper application of virucides on all horizontal surfaces, disinfecting all furniture and fixtures, and hot water and sanitizer extraction of upholstered furniture.

Responsive

4 COVID-19 Incident Response

KBS dispatches remediation teams to clean and disinfect areas potentially exposed to the virus. These teams are specially trained and equipped to treat the environment thoroughly so facilities can become safely operational as quickly as possible.

Workers for this service are equipped with head-to-toe level 4 PPE. After a minimum five-hour wait time, KBS teams perform deep cleaning and disinfection of all horizontal and vertical surfaces, which may also include disinfectant fogging and or UV disinfection. Dispatching response teams in a matter of hours, KBS has safely performed over 250,000 COVID-19 response cleanings nationwide.
