

# Transform your company's communications with a cloud phone system

## What is a cloud phone system?

Imagine if you could make business calls, listen to voicemails, and even host online video conferences from any phone, tablet, or computer. What if you didn't have to upgrade your equipment or phone system ever again? It's all possible with today's modern cloud phone systems.

A cloud phone system uses Voice over Internet Protocol (VoIP) technology to let you create a streamlined and affordable communications system for your company—including high-quality voice, conferencing, online meetings, internet fax, texting, voicemail, Auto-Receptionist, and more—and manage it all in the cloud.

## What are the benefits of a cloud phone system?

### Gives your staff mobility and flexibility

When your team needs to be on the go, you don't want them stuck at their desks waiting for an important call. With a cloud phone system, you can free your team to take and make calls—and even join or host online meetings—wherever they are, using any device. Your users can even use their existing smartphones to access the service.

percent.\* Plus there's no expensive hardware to maintain, and you receive free automatic upgrades to the system.

### Simplifies your business communications

Combine all of your calls, voicemails, video conferences, online meetings, texts, faxes, and team collaboration onto a single, easy-to-use platform.

### Works the way your business works

A cloud phone system puts you in full control of how your business communicates. In addition to all the features you get with a PBX system, a cloud phone system offers internet fax, voicemail-to-email conversions, and other advanced cloud features.

### Scales with your growing business

Add numbers as you need them. Reassign numbers easily from a user-friendly online portal. A cloud phone system easily scales to support your growing business whether you have one office or a dozen locations.

### Saves your company money

A cloud phone system uses the internet (rather than landlines) to reduce the overall cost of your communications by up to 60

## Why do other businesses use a cloud phone system?

### “Supports my mobile workforce”

Sarah runs a small but thriving real estate firm, and her agents are always in the field. Her cloud phone system lets her team keep things moving for their clients—even reviewing and editing faxed contracts—no matter where they are.

### “Gives us that big-business feel”

Vonda's design firm may not be the largest yet, but when clients call they're greeted with a sophisticated auto attendant and a helpful menu of options—giving them the comfort that they're working with an established firm.

### “Saves us a fortune in phone costs”

When Carl and Steve launched their financial planning company, the accounting wizards knew how expensive a standard phone system could be. So they chose VoIP communications— and are enjoying massive savings.

## How do you know if it's time to move to a cloud phone system?

- If you want to empower your employees to communicate from anywhere, using any device
- When you don't want to pay for any hardware and you want a flexible plan that's right for your business
- If you'd rather your phone system not require any maintenance work on your part in the first place
- When you'd prefer your phone system be easy enough to manage that you can make your own changes, anytime, through the cloud
