

# CAPTURE VITAL FOOTAGE WITHOUT LIFTING A FINGER

Axon Signal is a technology that enables your Flex 2 cameras to sense events that occur around them and start recording. Axon Signal integrates seamlessly into your routine, so you don't even notice it's there, whether you're driving your vehicle or using your TASER Smart Weapon. We know your job as an officer is tough. That's why Axon Signal lets you focus on the critical situations in front of you--not your camera.

## AXON SIGNAL PRODUCTS

Axon Signal is able to report events to Axon cameras up to 30 feet away.

**AXON SIGNAL UNIT (ASU):** Report events, like when you open the car door or activate the light bar, so that your camera can detect them and start recording. Ideal for cars, SUVs, and motorcycles.

**SIGNAL PERFORMANCE POWER MAGAZINE (SPPM):** Capture critical footage when using your TASER X2 or X26P Smart Weapon. The SPPM reports to your camera when your weapon is armed so it can start recording. The Smart Weapon also logs the moment that your trigger is pulled and arc is engaged.

## WHY AXON SIGNAL?

**IT'S EASY:** Record events without lifting a finger. That way, you can focus on the situations in front of you.

**IT TELLS A STORY:** Collect key information about incidents, from the triggers that activate your camera to the video evidence you capture of a scene.

**IT'S RELIABLE:** Choose the triggers that are reported to your camera, so your camera starts recording when your department policy says it should.
