We are happy to leverage this vast ecosystem to support the Cobb County and Omnia partners needs.</p>
<p>Technology Services and Solutions: A complete portfolio of technology services and solutions such as systems</p>	

Cobb County Requirements	Carahsoft Capabilities
<p>configuration, testing, software copying, hardware and software installation, upgrades and/or maintenance, system integration, network integration, extended warranties, warranty service, staff augmentation and any other services and solutions available from Offeror. Specific requirements will be developed on a task order basis and may include, but is not limited to, services and solutions such as:</p>	
<p><u>Virtualization</u>: Transform data center with virtualization to consolidate servers, reduce energy consumption, increase IT capacity, add system flexibility and prepare for cloud computing.</p>	<p>IT organizations are challenged by the limitations of today's x86 servers, which are designed to run just one operating system and application at a time. As a result, even small data centers have to deploy many servers, each operating at just 5 to 15 percent of capacity—highly inefficient by any standard.</p> <p>A key benefit of virtualization technology is the ability to contain and consolidate the number of servers in a datacenter. This allows businesses to run multiple application and OS workloads on the same server. Ten server workloads running on a single physical server is typical, but some companies are consolidating as many as 30 or 40 workloads onto one server. As you might expect, dramatically reducing server count has a transformational impact on IT energy consumption. Utilization of x86 servers increases from the typical 8-15 percent to 70-80 percent. Reducing the number of physical servers through virtualization cuts power and cooling costs and provides more computing power in less space. As a result, energy consumption typically decreases by 80 percent.</p>
<p><u>Physical Security</u>: Security solutions seaports, airports, water and wastewater, transportation, critical infrastructure, perimeter defense, physical and logical access control, identity management, antiterrorism protection, automated alarms and alerts, integration with databases containing critical security information, cyber security and asset management, endpoint security and other network security and IT security.</p>	<p>Physical Security solutions combine video management, access control, video analytics, intrusion alerts and more onto a single or consolidated platform of networks that can be accessed from anywhere and at any time through a Web browser. Data from these subsystems is automatically correlated, providing users with a comprehensive view of security operations.</p>
<p><u>Communications</u>: Communication solutions to converge voice, data and video communications onto a single, secure IP-based network.</p>	<p>The F5 BIG-IP family of products offers application intelligence that network managers need to ensure applications are fast, secure, and available. All BIG-IP products share a common underlying architecture, F5's Traffic Management Operating System (TMOS), which provides unified intelligence, flexibility, and programmability. Together, BIG-IP's powerful platforms, advanced modules, and centralized management system make up the most comprehensive set of application delivery tools in the industry.</p>
<p><u>Cloud</u>: Cloud solutions for scalable computing and storage capacity and rapid self-provisioning computing capabilities. This may include, but is not limited to, Cloud Infrastructure as a Service (IaaS), Cloud Software as a Service (SaaS) and Cloud Platform as a Service (PaaS).</p>	<p>With no minimum fee and a pay for what you use model, Google Cloud Storage capacity pricing is the most cost effective in the market. In addition, with lifecycle management Google Cloud storage allows you to reduce your costs even further by automatically archiving your objects to Cloud Storage Nearline and scheduled deletions. Store your data on Google's infrastructure with very high level of durability and availability. Google Cloud Storage stores and replicates your data allowing a high level of persistence. Google Cloud Storage is built with a replicated storage strategy. All data is encrypted both in-flight and at rest. The</p>

<p>Infrastructure: Infrastructure solutions such as data center management, network modernization and migration, desktop virtualization, risk and vulnerability management, and IT service management.</p>	<p>Google security model is an end-to-end process, built on over 15 years of experience.</p> <p>Datacenter Infrastructure is the backbone of delivering IT performance to the consumers of today's applications. Technology has shifted to become increasingly software-driven which puts more pressure on the infrastructure to deliver the level of performance the software is capable of or demands. Traditional datacenter infrastructure is being challenged to meet the demands of this new approach.</p> <p>New datacenter infrastructure technology embraces the software driven approach and is designed to accommodate large consumptions of data in a number of forms. Arista Networks has lead the network modernization shift by designing network switches with high buffers and high speeds. They provide a flexible solution to make the transition from a traditional approach to a modern infrastructure more affordable, by not requiring forklift upgrades to the entire datacenter. Network modernization is a key to delivering applications like desktop virtualization and big data analytics.</p>
<p>Data Management: Data management solution which uses technologies such as thin provisioning, de-duplication and automated storage tiering to improve storage utilization.</p>	<p>Data is the raw material of business – an economic input almost on par with capital and labor. However, data in most organizations is scattered across multiple operational and analytical systems. Big data with new sources, such as social media, cloud applications, and syndicated data services are on the rise, and many organizations are realizing that physical consolidation or replication of data is not practical for all data integration and business agility needs. Data needs to be made easily consumable by people who need it to advance the business.</p> <p>Data Virtualization is a lean data integration solution that provides easy, real-time, and unified data access across disparate sources to multiple applications and users. Data Virtualization makes data spread across physically distinct systems – such as multiple databases, XML files, and even Hadoop systems – appear as a set of tables in a local database. This comprehensive platform enables agile data provisioning by providing the following functions:</p> <ul style="list-style-type: none"> • Connect: Access data from multiple heterogeneous data sources with different access methods and storage models. • Compose: Easily create reusable, business-friendly data models and virtual unified views by combining and transforming data from multiple sources. • Consume: Make integrated data available on demand for consumption by external apps through open standards interfaces.
<p>Visual Communications: Visual communications that integrate</p>	<p>Now more than ever, people need the ability to</p>

Cobb County Requirements	Carahsoft Capabilities
<p>audio, video, voice and presentation capabilities.</p>	<p>collaborate effectively with colleagues, partners, and customers—around the world, across devices, and through technical boundaries. More and more organizations, including large enterprises and government agencies, are using Visual Communication to drive end-to-end, business-critical workflows for web meetings, eLearning, and webinars. The right Visual Communication solution delivers exceptionally rich interactions and enables organizations to fundamentally improve productivity.</p> <p>You can captivate your audience with rich, engaging, and interactive experiences and make them available to virtually anyone, anywhere, on virtually any device, with just a click of a button.</p> <p>Certain Visual Communication Technologies allow invitees to easily attend a meetings from the desktop without requiring a client download, and offers complete mobile-to-mobile collaboration capabilities to address the realities of today's business environments, where employees and customers are on the move worldwide.</p>
<p>UCC (Unified Communications and Collaboration): UCC video teleconferencing solutions that provide for critical infrastructure, emergency operations centers, command rooms, fusion centers, training rooms, and classrooms.</p>	<p>When disasters happen, first responders and emergency personnel are not always in the same place. Unified Communications and Collaboration allows you to set up a virtual command center that can be pre-loaded with maps, actions plans and emergency contact information. This allows first responders and decision makers to work together more quickly and effectively. In 2010 the US Southern Command used UCC technologies to support the Haiti earthquake disaster relief teams, and the Montana National Guard used it to coordinate efforts in fighting the wildfires in the summer of 2015.</p> <p>UCC technologies for distributed team collaboration efforts help government organizations accelerate team decision-making regardless of where people are located by equipping them with a powerful and easy-to-use set of tools for web conferencing and information sharing. Leverage existing investments in video conferencing solutions by integrating your video telephony devices supporting SIP/H.264. Nontechnical users can share everything from text and graphics files to multimedia presentations and websites; collect comments from multiple reviewers; and host live, interactive discussions online without additional downloads.</p>
<p>Broadcast Studio: Broadcast studio solutions for staff that oversee communications and public broadcast efforts which provide integration (system design engineering), fabrication, budgeting, scheduling, engineering, architectural planning (technical grounding, power distribution and facility load requirements), and equipment specification (video, audio, network and storage technologies).</p>	<p>Public sector communication is undergoing an incredible transformation. Government organizations that adopt innovative technologies can capitalize on this transformation to create mission value and cost savings opportunities.</p> <p>Broadcast Studios help public sector organizations accelerate their direct communications with the public in</p>

	<p>order to drive measurable benefits. More than 1,000 organizations worldwide use Broadcast Studios and secure cloud-based enterprise marketing platforms to reach, inform and engage their audiences through web, email, mobile and social media channels.</p> <p>The utilization of multiple channels enables Broadcast Studios to send personalized, targeted communication to promote services, enhance public awareness, and drive better involvement in agency programs through email, text messaging and other digital media channels.</p>
<p><u>Law Enforcement:</u> Public safety solutions such as in-car video, body worn cameras, license plate recognition, mobile computing, city surveillance, and digital evidence management.</p>	<p>Carahsoft works in law enforcement with a number of vendors; with various solutions like: Acadis, ADF Solutions, Adobe, Airgility, Airversity, Authentic8, AWS, Axon, BlackBerry, Blackswift, Blueforce Development, Cellebrite, Chainalysis, Commvault, Conceal, Darkowl, Dedrone, DigitalBlue, Elsignt, Flashpoint, Ghost Robotics, Google Cloud, Gridless Power, Icaros, ikeGPS, Informatica, Inspired Flight, Juniper Unmanned, Lightsense, Magnet Forensics, Mark43, Measure, Mi-Case, Microsoft, Microsoft Surface, NTrepid, Nuance, NVIDIA, Okta, piXlogic, Qii.Ai, Recorded Future, Red Hat, Reveal, SAFR, Salesforce, SkyX, Software AG, Sonim, Tableau, TransUnion, Trimble, VELARY, Veritone, Vidizmo, Vintra, VIQ, Voyager Labs, Wickr</p>
<p><u>Mobility:</u> Mobility services to keep users connected, responsive and secure such as email protection, download prevention, containerize content on devices, self- destructing content, and content linked back to the user.</p>	<p>The Mobility/Telework portfolio at Carahsoft includes industry-leading emerging technology solutions to enable government agencies to address a changing workplace. Organizations need to adapt rapidly to shifting user needs while maintaining data privacy and compliance requirements.</p> <p>The US Communities contract would benefit from access to a host of software manufacturers whose focus is to turn a government entities mobile and telework program in to a fully operating and compliant environment to fully meet an agencies mission with:</p> <ul style="list-style-type: none"> • Secure Mobility and Device Management Mobile • Applications and Mobile Productivity Applications • Mobile Application Development and Performance Management • VDI solutions and Telecom and Expense Management software.
<p><u>Asset Management:</u> Asset management solutions to identify and manage installed software, hardware and license entitlements.</p>	<p>Inaccurate inventory, wasted resources, compliance issues, and service delays are all every day risks for enterprises that have serious consequences if not addressed. To mitigate risk, organizations need to know the assets they have, where they are, usage entitlements, who uses them, how they are used, how they are configured, what they cost and the value they deliver.</p>

Cobb County Requirements	Carahsoft Capabilities
	<p>Asset Management tracks the financial, contractual, and inventory details of hardware, software, and virtual infrastructure – as well as non-IT assets – throughout their lifecycles. Asset requests are handled using workflows to obtain approvals, validate entitlements, issue chargebacks, and provision services. Once an asset is deployed, Asset Management records all maintenance activity and enables IT to perform regular audits, right up until asset retirement.</p>

as possible for our employees to recycle as much as they can. Carahsoft uses recycled materials whenever possible. For example, hard copy bid submissions are printed on recycled paper and shipped using recycled packing materials.

Carahsoft uses only Energy Star compliant hardware, which uses substantially less electricity when items are not in use. Additionally, the lights in our office are on a timer to ensure that lights are turned off when the employees are not working. Likewise, motion detectors ensure that lights are not left on when rooms are empty.

Carahsoft has implemented VMware internally, which moves our servers to a virtualized cloud environment, eliminating the need for physical servers in our office. This has drastically reduced our server footprint, allowing us to save thousands of dollars each year on heating and cooling our data center.

Carahsoft also seeks to reduce our carbon footprint by providing transit benefits for employees who use public transportation to commute to and from work. In fact, we recently relocated our offices to within less than half of a mile of the Washington Metrorail System, making it easy for employees to take advantage of sustainable public transportation.

Carahsoft is always open to suggestions on how we can encourage more sustainable practices and how we can implement further policies to reduce our company's footprint.
