PC-as-a-Service

REDUCE RISK. PRESERVE CAPITAL. EMPOWER MOBILITY.

Trade unpredictable hardware costs for a fixed, managed experience with enterprise-grade support & security.

BENEFITS

The PC-as-a-Service model transforms device ownership into a predictable monthly operating expense. With 5G-connected Lenovo® ThinkPad™ T14 Gen 6 laptops, white-glove lifecycle management, and enterprise-grade security, your teams stay connected and supported—without the CapEx burden.

\$99 per month/36 months

Simplify Your IT Mobilize Your Workforce Cut CapEx

A fully managed device solution combining 5G connectivity with white-glove IT services

What is PC-as-a-Service?

PCaaS stands for PC-as-a-Service. It's a fully managed device solution that bundles 5G-ready laptops, Microsoft 365, live 24/7/365 support, device security, and lifecycle services into one predictable monthly fee.

A Modern, Fully Managed Approach to the Laptop Lifecycle

This is not just leasing, but a fully managed service for the laptop - Unlike traditional outdated DaaS (Device-as-a-Service) programs, PCaaS provides a comprehensive, end-to-end solution that includes procurement, configuration, deployment, asset management, helpdesk support, and advanced exchange. It enables organizations to offload the day-to-day burden of managing end-user laptops while ensuring users always have up-to-date, secure, and optimized technology. This allows IT teams to focus on strategic initiatives rather than hardware logistics.
