

Intelligent Air Assessment

Partner with Daikin: Your Consultant for Intelligent Air

Indoor environment is an essential factor for sustaining a more comfortable, healthier, and cleaner building for occupants. Improving air parameters is key to keeping occupants' productivity high and creating an environmentally-friendly workplace as a top-tier company. In these unprecedented times, HVAC equipment, control systems, maintenance and service programs can improve air parameters and help you save while satisfying shifts in building usage.

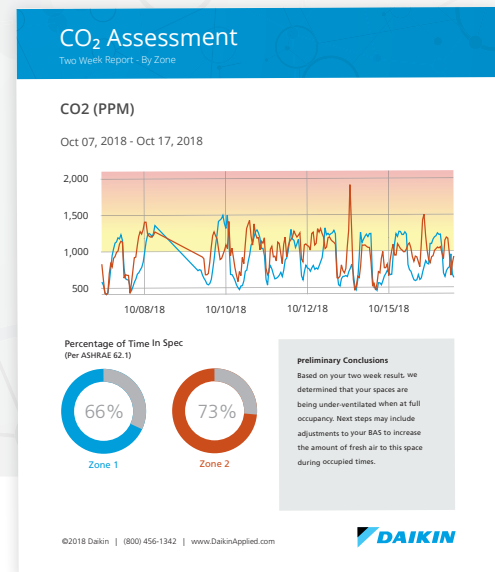

Air Assessment

Daikin is a global HVAC solution provider with high-class products, industry-leading performance, energy efficiency, customization, and a trusted high-service program.

Daikin provides air assessment services to identify gaps between present facility usage and expected conditions and propose executable recommendations to improve air parameters and sustain it as expected.

Building Assessment

Daikin assesses your building through quantitative methods of ventilation diagnosis, air parameter measurements, and air evaluations with specialized sensors. Your assessment will compare your building to ASHRAE, WHO, and WELL guidelines. In the example below, providing high-performance filters or upgrading the ventilation system reduces particle matter, including viruses. Recommendations could also include conducting air duct and coil cleaning to keep clean air in your building or BAS adjustments to increase ventilation during peak occupancy and reduce CO₂ levels.

Daikin Solutions Include:

ONE-TIME SOLUTIONS

- Advanced filtration solution
- Ventilation system upgrade
- Air duct and coil cleaning
- Remote inspection and control

CONTINUOUS SOLUTIONS

- Maintenance contract
- Control upgrade
