

## PULSE RFID TECHNOLOGY

**PULSE**  
TWENTY FOUR SEVEN • RFID TECHNOLOGY

Endries International's revolutionary PULSE technology is an RFID multi-bin fulfillment solution that offers constant understanding of demand, reduces the need for stock on hand and therefore the need for valuable floor space. The innovative RFID chip and patent pending kiosk design is what makes this solution one of a kind.

### Features/Benefits:

- 24/7/365 Demand Recognition
- Capable of Full Lot Traceability
- Eliminates Comingling of Inventory
- Reduces the Need for Stock on Hand and Floor Space
- Intelligent Dashboard Features
- Portable Kiosk Design for Dynamic Environments

### How Does It Work?

Empty RFID bins are placed in the PULSE kiosk

Customer receives instant verification that bin was received

Instantaneously Endries receives notification of demand signal

Order is pulled and shipped to customer for put away by Endries
