

Cyber-Safe U.S. Schools, Cyber-Aware U.S. Students

Fortinet Security Awareness and Training Service:
Education Edition

Educator Training | Student Curriculum | Administrator Platform

Schools in every country face a growing array of cyberthreats. Whether caused by a malicious attack or human error, a breach can lead to the exposure of private information, data loss, downtime, and even financial extortion.

Those risks can be reduced significantly by creating a cyber-aware culture: training staff on the cybersecurity best practices and teaching students how to keep themselves cyber-safe.

As a global leader in cybersecurity, Fortinet is committed to helping educators and students participate safely, securely, and confidently in the connected digital world. That's why we developed the Security Awareness and Training Service: Education Edition—offered at no cost to primary and secondary schools around the world.

HIGH-QUALITY, EXPERT RESOURCES AT NO COST

The Security Awareness and Training Service: Education Edition has three complementary components to help institutions deliver timely, trusted cybersecurity training and learning:

The threat is real.

91% of educational institutions surveyed by Fortinet said they had experienced a breach in the last 12 months.

Security Awareness Curriculum for the Classroom

A complete, flexible, classroom-ready curriculum, developed by teachers for teachers, to build students' cyberskills, with age-appropriate lessons for learners aged four to 18

Cybersecurity Awareness and Training Content for Educational Staff

Online, modular training and awareness tailored specifically to the needs of teachers, administrators, and support staff

Administrative Platform

A secure, easy-to-use dashboard and toolset to manage cybersecurity training campaigns, tracking, and reporting

**Security Awareness
Curriculum**

BRING CYBERSECURITY INTO THE CLASSROOM

Fortinet's **Security Awareness Curriculum** is designed by teachers to integrate easily into existing courses.

- **Flexible learning design** composed of 60 to 90 minutes of lessons that can be delivered over several days
- **Full set of materials**, including teacher guides, lesson plans, slides, handouts, and multimedia assets
- Builds **cyberskills** and **key competencies** such as creativity, critical thinking, computational thinking, and communication
- **Complete curriculum for students** ages four to 18 with additional elective courses for secondary schools
- **Minimal classroom technology** required

The curriculum covers Fortinet's Cyber Seven strands.

ESTABLISH A CULTURE OF CYBERSECURITY

Fortinet **Cybersecurity Awareness and Training Content for staff and faculty** provides educational organizations with everything they need to create and reinforce a cybersecurity culture.

- Engaging, **interactive training content** introducing **essential skills and knowledge** for security awareness, data privacy, internet security, password protection, communications threats (email, SMS, and voice), and physical security training obligations
- Awareness campaigns to **increase engagement and reinforce** the knowledge and skills learned in training
- **Certificates** of completion for all graduates

MANAGE AND ADMINISTER WITH EASE

The Cybersecurity Awareness and Training Service includes a full-featured administrative platform with an intuitive interface that's easy to use.

Key features:

- Active **monitoring and out-of-the-box reporting**
- At-a-glance campaign and user activity **dashboard**
- Custom **branding and co-branding** capabilities
