Facebook’s Portal TV feels natural

Talking Tech
Jefferson Graham
USA TODAY

I don’t like the idea of granting my TVs access to Facebook and allowing the social network to install a video camera and microphone in my living room.

But I’ve got to admit its new Portal TV is, hands down, the best video chat device I’ve ever come across. And to communicate with my relatives, I could let down my guard and let Facebook in.

There are some concerns, and they are big ones. More on that below.

I’ve tried the vertical phone thing with friends and family on FaceTime and Google Hangouts, I’ve done laptop-to-laptop chat, Periscoped, Facebook Live’d – you name it.

But with Portal TV in the living room – hanging out on the couch, without having to hold a phone in front of my face or sitting statically by a laptop or desktop – it just seemed so natural.

What is Portal TV?

Portal TV is the next step for Facebook, which in 2018 introduced the Portal video display unit for chats, playing music and games. The initial units were 15 inches and 10 inches and sold poorly the first year, according to a sales survey by Voicebot.ai. This year, Facebook upgraded the Portal with 8-inch (\$129) and (a revamped) 10-inch (\$179) models, adding the ability to do WhatsApp chats as well.

For \$149, you can buy Portal TV, if you can get over the social network’s various privacy breaches and its tendency to

Video chatting with Ed Baig on Facebook Portal TV. JEFFERSON GRAHAM

track personal data to sell to marketers. If you’re considering any of the Portal units, this is the one to get.

Why buy a little box for video chatting that does little beyond video chat – yeah, it plays music and shows a handful of videos, but you get that with TV, and the bigger screen is way prettier to look at. On a large, flat-screen, in 4K resolution, whatever size TV you have is going to look way better than 10 inches.

How Portal TV worked

My video chat with colleague Ed Baig, on my Portal TV test unit to his, looked fabulous. I was in his basement, he was in my living room, and the Face-

book Portal camera easily panned and zoomed along with us as we moved, to follow us around the room. Not in a creepy way, but as a tool to make the visuals way more interesting.

My other video chats were good, but nowhere near as impressive as Portal to Portal, which is the optimum experience.

I called my brother, who held up his phone vertically cropping out half of the image, which is what happens when the camera isn’t held horizontally. When I called USA TODAY colleague Trevor Hughes. He was in front of his laptop, in horizontal, thank you, and that was great. But he was stuck behind a desk, while I was free to roam around.

If you’re considering Portal TV, you’ll really want two of them. (Facebook offers a \$50 discount if you buy two, so the total bill would be \$250 plus tax.)

But, still, there are concerns

Facebook knows it has privacy issues to contend with. The unit is “private by design,” Facebook says on its website. To appease concerns about that always-on video camera, the Portal has a cover that can slide over the camera when not in use – if you remember to do that.

Don’t think for a minute that Facebook isn’t monitoring you. When you connect on a video call, “we collect information in a similar way to other Facebook products,” the social network notes. For instance, it notes that you’ve made a call, who you called and where, and which other Portal apps (which include Pandora and CBS All-Access) have been opened and used. That “may be used to inform the ads you see across Facebook,” the company admits.

Facebook says it does not listen to, view or keep the contents of your video or audio calls, “so nothing you say on a Portal call is used for advertising.”

However, it also says that when you use the “Hey, Portal” wake words, it records and transcribes your commands and invites users to go to their Portal settings to delete them.

But in typical Facebook fashion, it makes it nearly impossible to opt-out, by sending you to a computer or mobile device to type in a code that’s such a hassle, you give up on the spot. Oh, if only Apple, without all this privacy baggage, had created the product instead.

Portal TV is available at Facebook’s online store, Best Buy, Bed, Bath & Beyond and Amazon.

KNOW YOUR STUFF

Fridge shelf no better for battery shelf life

Know Your Stuff is a new column that unlocks the hidden secrets about the everyday products you own.

David Kender
USA TODAY

If you were to peek inside my refrigerator, you might see a surprise next to the butter drawer: my batteries. I keep them there because, at some point in the foggy past, someone told me it was good idea, and I believed them.

However, I’ve learned that gut instincts often fall apart in the face of actual facts. So I took my question to the experts and learned, yet again, that even the simple things we own can be surprisingly complex.

Myth: Storing batteries in the refrigerator prolongs their life.

Fact: It’s partially true, but you’re better off not doing it.

In order to understand why, it’s helpful to have some insight into how a battery works. To keep things simple, we’ll limit ourselves to common AA and AAA batteries – not smartphone or laptop batteries.

To get technical for just one moment, batteries release energy because of a chemical reaction between two or more compounds stored inside. Electrons flow out of the one terminal, through whatever device they’re powering, and back into the other terminal.

But even when they’re not plugged in, those electrons can sneak out of the battery, draining their capacity through a process called self-discharge.

It’s easy to see how common wisdom would point towards the refrigerator as a solution: If you can slow down the chemical reaction, you should be able to store batteries longer.

So, should you? The answer from battery makers is a uniform and unequivocal.

Experts say don’t store your batteries in the fridge. JACKSON RUCKAR/REVIEWED

quivalent.

“That’s a long-held myth, and the answer is no,” says Tom Van Voy of Panasonic Energy Corp. of America.

All major brands recommend a clean, dry, room-temperature environment.

When stored properly, the discharge rate of a single-use alkaline battery, the

most common type in the U.S., is negligible – only about 3% per year. Single-use lithium batteries lose even less.

While refrigeration is a no-no, temperature still has a big impact on a battery’s shelf life.

When battery makers recommend “room temperature,” they generally mean between 68-78°F. Depending on your location, though, your house may get a lot warmer than that. And the hotter it gets, the faster your batteries lose their charge.

Yet another reason experts recommend not keeping batteries in the fridge is condensation.

“Humidity can impact batteries as a whole, says Van Voy, “and that’s why we recommend a dry storage environment. You build up condensation in a refrigerator.”

If you insist on keeping your batteries in fridge, at least put them in an airtight container where water vapor can’t get at them.

But consider me reformed. You’ll find my batteries in the drawer from now on.
