

A woman with braided hair, wearing a black tank top and light blue shorts, is seated on a grey and orange Kompan outdoor exercise machine. She is performing a pull-up or similar upper-body exercise, with her arms extended upwards and hands gripping the handles. The machine has a grey frame and orange accents. In the background, another person is visible, also using a similar machine. The setting is outdoors on a paved area with greenery and a building in the distance.

marked with this symbol can be used directly from a wheelchair.

INCLUSIVE FITNESS

Fitness equipment marked with this symbol can be used by everyone on equal terms independent of gender, age, body weight, fitness, or cognitive skills.

MADE FOR THE OUTDOORS

At KOMPAN we have built outdoor activity areas for more than 50 years. We use only the toughest materials to make sure that our solutions can stand the tests of weather and usage for decades to come.

FOR ALL LOCATIONS

Available in several designs and materials. Obstacle courses and street workout also come in Robinia wood, to have a natural look in nature, or to bring nature into an urban environment.

for

FITNESS & SPORT FOR OUTDOORS

For all users, all purposes, and all locations

 Across the world, people are moving outside to be active. Especially in recent years, there has been an increase in this trend where cities, communities, sports clubs, housing organizations, etc. are building outdoor fitness and sports areas for inhabitants and members.

For all users and all purposes

- Gyms that want to provide their members with the option of being outside and getting truly challenging exercise
- Sports clubs that want their broad audience of members to have a motivating obstacle course as an option
- Municipalities that want to make fitness available to everybody in the proximity of residential areas
- Cities that want to make outdoor sports courts available for teenagers and adults to play basketball, pickleball, football, hockey, etc.
- Senior housing that wants their residents to stay active and have a healthy senior life.

everyone

THE RIGHT INTENSITY IS IMPORTANT

The most effective exercise takes place in the moderate-to high-intensity category. Because people are different, equipment must be able to offer a wide range of different workloads.

Intensity required

85-100%

High - effective but difficult

60-85%

Moderate - effective training

0-60%

Low - low effect

EFFECTIVE OUTDOOR FITNESS

More value in less time

■ ■ ■ We know very well from science what it takes to exercise effectively. Whether for health or performance, we know the intensity, duration, and type of exercise that creates results. It seems obvious that exercise equipment must have the functionality to accommodate these demands, but that has not always been the case for outdoor fitness. With the latest offerings from KOMPAN it's now possible to fully re-create outdoors what has normally only been available in high-quality indoor training facilities.

One of the things we care about is making exercise equipment for people of all sizes and abilities. With KOMPAN products, this is achieved in two ways: scalable user positions and adjustable resistance. In other words, no matter who you are, you will be able to use KOMPAN's equipment in a way that optimizes your personal results.

THE RIGHT WORKLOAD FOR EVERYONE

The workload on the cardio bike can be adjusted from very easy to extremely hard.

MAGNETIC POWER

An innovative magnetic breaking system allows the user to increase the resistance by increasing the speed of movement. The patented system also functions as brake when someone drops the magnetic bells and will reduce the impact significantly.

TESTING FOR EFFECTIVENESS

The cardiorespiratory effectiveness of the cross trainer is validated with the same test methods that are used to test professional athletes.

ENGAGING THE RIGHT MUSCLES

The screen shows muscle activity when exercising on the cross trainer. The design of all KOMPAN equipment is carefully fine-tuned to give the optimal effect and experience for the user.

SCIENTIFIC PRECISION

Everything is double checked and then checked again.

know

FITNESS BASED ON KNOWLEDGE

The KOMPAN Fitness Institute

 Knowledge is the foundation for making KOMPAN Fitness products the best they can possibly be. To make sure that knowledge is in fact anchored in our culture, we have established the KOMPAN Fitness Institute. The institute is led by exercise physiologist Morten Zachø, MSc, who has a background in research. KOMPAN Fitness Institute does its own research, but also focuses on following the latest health- and exercise-related science

as well as collaborating with universities and networks of experts.

The collective knowledge from science and best practices goes directly into product development, so whether it is products for seniors or exercise bikes for athletes, the end users are guaranteed a safe and effective exercise experience.

Ledge

FOR ALL ABILITIES

KOMPAN Fitness Institute work out science-based and user test-informed equipment and design recommendations

Play and exercise are essential activities for everyone's health and well-being. Play is especially important as it is a human right for children and is closely connected to their development. At KOMPAN, we encourage all children to experience and enjoy the physical, social-emotional, and creative learning benefits of playgrounds.

Inclusive play and fitness are at the core of everything KOMPAN aims to achieve. The result is universal designs that embrace the needs of all. Through inclusive, universal playgrounds and fitness sites, everyone, regardless of their abilities, can play or exercise with peers, parents, in groups, or individually.

This design philosophy is manifested in KOMPAN's play and playground equipment as well as our fitness equipment. Everyone can achieve a positive experience when visiting a KOMPAN play or fitness site. Health, like play and well-being, is for everyone.

Of course, we all have our individual limits regarding our level of physical fitness. Inclusive playgrounds and fitness areas cater to this and can provide an experience that allows everyone a way of reaching past and overcoming their limitations.

Fitness areas for all:

Principles for inclusive outdoor fitness:

- Accessibility
- Ease of use
- Adjustability
- Products being clear in color and design signals
- Multifunctionality (when possible)
- Combining general and specific functionality

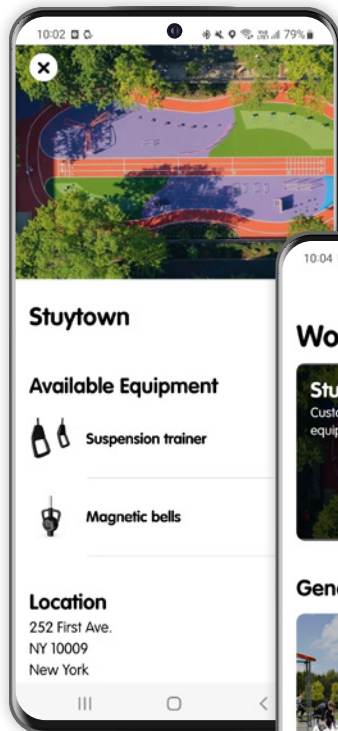

USABLE FOR ALL

The multilevel activities of the fitness products make them usable for all.

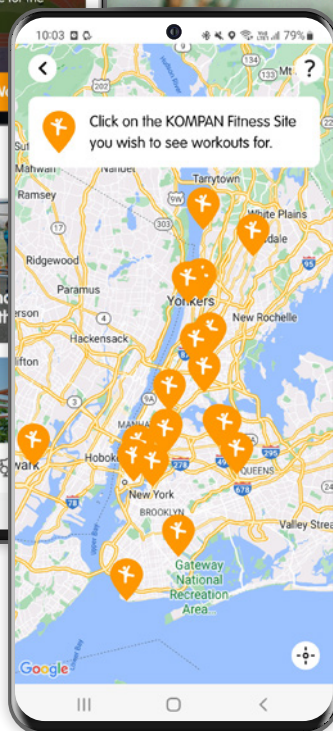

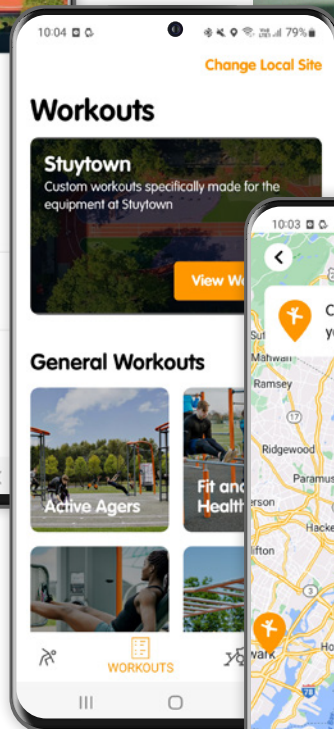

Download the white papers on inclusive design research and recommendations for fitness grounds from our webpage: www.kompanfitness.com

SITE-SPECIFIC WORKOUTS

When on a KOMPAN fitness site, the app shows the user how to use the equipment and get an efficient workout. This is a great guide for the inexperienced user.

KOMPAN Fit app

Available for download in App Store or Google Play.

Personal digital trainer

FIND A FITNESS SITE NEAR YOU

The app points to the nearest KOMPAN fitness site. For each suggested site, the user can see which equipment is at the site and guides on usage.

CREATE POPULAR FITNESS SITES

Inspire, motivate and guide users

Getting people active in the outdoors doesn't just come with installing the right fitness equipment in the right area. You also need to find ways to inspire, educate and motivate them to come to the fitness site and stay there.

The KOMPAN Fit app is designed to do just that by being a digital guidance for users of all ages and fitness levels. It guides users on how to use the equipment, what exercise program to use and acts as that personal digital trainer people need to get started and stay motivated.

OUTDOOR FITNESS

Circuit Training is a compact and efficient training method involving cardio and strength equipment. This outdoor circuit includes some of the most popular indoor cardio and strength training equipment ensuring an effective full-body workout. The equipment is adjustable to accommodate a wide variety

of individual fitness levels. They are also easy to use and extremely durable, making Kompan fitness sites ideal for public parks and community spaces. A timer is featured in the middle of the site for use during interval training or other timed workouts.

6 FAZ30100	Step, 8 in		

The elegant curved structures fit perfectly into any environment, whether it's a boardwalk, park, or on top of a skyscraper. This solution requires little safety surfacing and can blend in to any natural setting. The unique design and organic shapes invite people to try the equipment and make it part of their exercise routine. The fact that there is something for everyone makes it motivating for users of all ages and abilities. The bikes motivate people who are out for a

stroll to sit down and go for a ride! While they are enjoying the view, they can get their daily dose of cardio training. Strength can be improved by using the magnetic bells, starting with low weights for beginners and the heavier weights when looking for a challenge. The training value is huge and there are countless exercise variations. It's a perfect solution for a small space with XL ambitions. Big enough for a sports team or a school class, this solution will fit anywhere.

ACTIVE BOARDWALK

Minor regional deviations can occur due to differences in safety standards

3 FAZ30300	Step, 24 in
4 FAZ30200	Step, 16 in
5 FAZ20101	Magnetic Bells, Multi-net & Suspension Trainers

This outdoor fitness setup is the perfect extension of a sports center. It provides excellent cross training opportunities with a central core of free-weight equipment surrounded by a challenging and engaging obstacle course. Users will find the equipment and layout familiar, as it is borrowed from indoor fitness design. Now users can train outside with products like suspension trainers and magnetic bells in a safe and vandalism-proof environment. Even better, everybody can engage at their own level due to the smart patented adjusta-

ble exercise equipment. The obstacle course surrounding the cross training area can be used independently or in combination with cross training, adding a lot of value. The fun factor is the element that gets people started over and over again. Adults can train together or with their children, inviting everyone to learn that an active lifestyle is a fun lifestyle. In fact, once children are introduced to the courses they often find them so engaging that the new challenge will be to keep up with them.

On the rooftop, this gym has created the perfect extension of the indoor offering! A space that allows their members to do a full workout routine while enjoying the outdoors, benefitting from all the positive effects on their health and well-being. By using a similar layout to the indoor area

and creating different workout areas, it's easy for the members to move around and find the activities they prefer.

The great thing about this training space is that it can just as easily be built in a public park, as all the equipment is certified for usage in unsupervised public areas.

As we advance in life, physical mobility is vital for us. To avoid becoming restricted, we need to keep our bodies mobile and our minds healthy. This solution is designed to promote active and healthy ageing and to make injury rehabilitation available outdoors in the public space. The beautiful garden invites everyone to join in and be active at their own level, which is easy to do with the adjustable strength and cardio equipment, ensuring easy maintenance and development of endurance and strength.

Falling is a serious concern for older people. Accidents often occur because the person is unable to overcome or react to minor changes in the surface they walk on. By using fitness equipment on a daily basis, the elderly can improve their balance, endurance, strength, and flexibility – and ultimately, lower their risk of falling.

The combination of play and fitness equipment allows parents to work out while their children enjoy the playground. Parents can be active role models, inspiring their children to live a healthy and active life throughout their childhood and into adulthood. Robinia(TM) wood fitness equipment fits perfectly into natural settings and offers a wide variety of different workouts for adults.

Children get exercise through play. On this playground they improve their muscle strength climbing on the BLOQX, develop their balance spinning on the Supernova, and improve their endurance exploring the Giant towers. This site helps promote an active lifestyle for children and adults alike.

Obstacle courses are dynamic fitness environments that encourage repeated engagement. They also have a fun and whimsical character which provides a rare opportunity outside of more serious types of training for playful exercise. The obstacle course above is designed for families to enjoy, inspired by obstacle course runs. Here, people need to run,

jump, crawl, climb, and keep their balance. What makes it so appropriate for families and different from the military versions is that you don't need to be super fit to have fun on this obstacle course. All obstacles offer both easy and difficult exercises so that everyone can do as many laps as they like at their unique fitness level.

An action-packed area where everyone can work on an active lifestyle. Like the indoor health centers, this outdoor gym is divided into different areas, offering multiple exercise options. By combining it with a big playground, it becomes a destination area and brings the neighborhood together. It's a great mix of areas with equipment that's easy to use and doesn't require a lot of knowledge about training. This attracts people who want to have an effective outdoor training by themselves. The street workout

and crossfit areas appeal to a younger audience, as the inviting structures encourage fun and challenging training and the possibility of group classes. When creating an area of this size, it's important to leave open spaces. Here, these are provided by a running track and a group training area that can be used for a wide variety of activities such as warm-up, yoga, and boot camp classes. A perfect area for bringing the neighborhood together.

This site is created based on the principles of universal design. It works equally well for a wide range of ability types and age groups. Everyone can find items tailored to their unique needs which makes the site inclusive and accessible. The strength machines can be used directly from a wheelchair or with easy transfer from one. The different cardio

options ensure that there is something for all and the equipment use zones guarantee ample space to move and maneuver around. The equipment is color-coded with bright colors to make the different workout zones easy to recognize. This makes the site welcoming for everyone.

The injury prevention zone is designed as the ideal solution for anyone who wants to train for health and injury prevention – or for anyone who needs to rehabilitate after an injury or disease. The solution focuses on three key elements: cardio, strength, and mobility. For each of the selected categories, the equipment is based

on controlled and safe movements and adjustable resistance. This means that people with injuries, disabilities, or other weaknesses, can exercise effectively at their own level. For people with limited physical capacity it is also important that the site is designed to be inviting and to build confidence.

CARDIO

Intense workout

The new Cross Trainer adds an extra intensity layer with a special sprint mode (glute mode) that allows a high calorie burning workout.

Connected experience

When working out, motivation is key. Users can connect via Bluetooth to the KOMPAN Cardio app and get access to instructional and motivational videos, store activity, and share to external platforms.

Optional touchscreen

Durable 7" LCD color touchscreen with IK8 protection glass gives instant feedback on speed, distance, time, burned calories, etc. Resistance can be adjusted on the screen.

BIKE, ARM BIKE, AND CROSS TRAINER

Indoor cardio taken outdoors

 The popular cross trainer known from indoor fitness is now available for outdoor training. With the best ergonomics on the market, KOMPAN's Cross Trainer gives an intense workout and adds an extra intensity layer with a special sprint mode (glute mode) that allows a high-calorie workout to strengthen the gluteus and lower limbs while focusing on the core stabilizer muscles. The KOMPAN Cross Trainer provides a safe, non-impacting workout without putting unnecessary stress on the joints.

The KOMPAN cardio family is designed to give users of all ages, physiques, and fitness levels a cardiovascular training that keeps their heart rate above the needed 65% of their maximum heart rate. The intelligent system automatically adapts the workout to the pace set by the user, ensuring that the user gets a proper resistance.

MADE FOR THE OUTDOORS

Waterproof design made of extremely durable materials, highly resistant to vandalism and heavy usage.

CARDIO FOR ALL

The Arm Bike gives an intense upper-body workout. It's designed to include users of all abilities by being able to be used standing, seated, or from a wheelchair.

CARDIO

Adjustable workout

City Bike

The City Bike has an easy-access height, a wide comfortable saddle, and a comfortable handlebar. This is a universal stationary bike that can be used by anyone.

Sport Bike

The Sport Bike has the same adjustable resistance (25-750 watt) as the City Bike, but the geometry of the bike is tailored towards performance training. The saddle is narrower and the handlebar is placed lower than road racing or indoor spinning bikes.

Cross Trainer

The KOMPAN Cross Trainer is on par with the best of its indoor cousins and adds new features like the innovative sprint mode that allows the user to add power and shape to thighs and buttocks.

Arm Bike

The Arm Bike is truly inclusive and can be used by people seated in wheelchairs, giving a great workout for the upper body. When the exercise is done from a standing position it provides a full body workout, engaging all large muscle groups.

STRENGTH

Built to last

All moving parts, including the mechanical stops, are hidden in a fully closed cabinet and made of aluminum, stainless steel, or galvanized steel. As a result, entrapment and corrosion is not possible, making the system extremely safe and durable.

Weight stack

The user can adjust the weights in 16 steps of 11 pounds from 11 pounds to 176 pounds.

Instruction and adjustment

On each product, there are clear instructions on how to correctly perform the exercises. A QR code links to the KOMPAN Fit app for more exercises and workouts. With the new patented adjustment mechanism it's super easy to select the desired resistance with just a quick turn of the handle. At the same time, there's no risk of finger entrapment or a pin getting lost.

HANDLES

The special design of the handles make it possible for people of different heights to achieve the correct working position without adjusting the seat. The design also allows for varying grip positions for functional purposes when targeting specific muscle sections and avoiding overload injuries.

SEAT

The seats are extremely durable and due to clever design with a cut-out center and cut away edges, they are also very comfortable.

EASY-TO-USE ADJUSTABLE EQUIPMENT

Indoor functionality with outdoor quality

 The new strength training machines from KOMPAN are completely changing the game for outdoor fitness. Now it's possible to have a full high-quality replication of the exercise setup known from indoor fitness. The new machines work with the same biomechanics and resistance mechanisms as indoor selectorized strength machines but add in the necessary outdoor features such as safety, durability, and optimized simplicity for the user.

The great thing about selectorized strength machines is that they can be used by everyone. They are great for active agers, great for athletes, and great for people who just want to be healthy and feel good. Because of the controlled movements and the quick and simple selection of resistance, the machines are safe, easy to use, and very time efficient.

CROSS TRAINING

Suspension trainer grip

The ergonomically shaped handles make it very easy to position hands and feet correctly in a quick and comfortable way.

FUNCTIONAL OUTDOOR TRAINING

Use gravity and your own bodyweight

■ ■ ■ Cross training is a strength and conditioning workout that is made up of functional movements performed at a high intensity level. These movements are actions that people perform in their day-to-day life, like squatting, pulling, pushing, etc. Most users do workouts which feature variations of squats, push-ups, and weightlifting that last for predetermined amounts of time to help increase strength and stamina. This varies from a traditional workout, which determines how many reps

to do over any period of time and has predefined movements.

The amount of different exercises which can be performed on the Cross Systems is huge and also allow users to easily change the complexity and intensity of the workouts, making it a system which allows users of all ages and abilities to exercise in a fun and effective way.

MAGNETIC BELLS

Three different weights (14, 20 and 26 lbs.) are available and they can freely rotate and move up and down a vertical tube, allowing for a huge variety of exercises.

BIG SIGNS

The big information signs show a selection of the most relevant exercises with a variety of difficulty levels. The QR code will link to a video of the exercise and to the free KOMPAN app for even more exercises and workouts.

JUMP BOXES

The box is one of the simplest yet highly versatile training tools. Many exercises can be completed using it, from simple step-ups to plyometric jumps.

CROSS TRAINING

Scalable functional training in a beautiful design

Cross Systems are tall and visible from a distance and with their dynamic look, they signal to citizens to come and exercise. They are designed as open structures providing innovative fitness equipment ranging from suspension trainers and pull-up bars to free weights and parallel bars. Central to Cross Systems is the scalability of the resistance: allowing everyone to train according to their individual levels of fitness.

The different frames can stand alone or be placed as joined structures, ideal for group training.

Even people who do not work out appreciate the Cross Systems frames. In 2017, the Cross Systems won the Good Design Award in Australia and the European Product Design Award.

Compact functional training

Don't let the compact label fool you – While this cross-training system could be used within a smaller layout, its high-quality craftsmanship will stand the test of any high-intensity workout.

The Compact Cross System will provide its users with the same functionality as the standard Cross System solution. It can also be used as a standalone fixture or customized and joined with other structures to create a unique training experience.

Each section has the ability to be set up with various exercise activities, such as kettlebells, suspension trainers, or pull-up bars. This solution is ideal for schools, municipalities, and housing areas.

STREET WORKOUT

Optimized exercise

The Overhead Ladder is designed to give the best possible hand grip and has the right distance between the bars.

Extra wide pull-up bars

54 inch wide pull-up bars designed to give plenty of space to dynamic exercises and promote sideways exercises such as the typewriter pull-up. Allow users to do pull-ups next to each other and thereby compete with or motivate each other.

For the best possible hand grip, the diameter of the pull up bars are optimized to 1.25 inch.

HUMAN FLAG

The ultimate street workout and calisthenics exercise. It's an impressive gravity-defying exercise.

THE ULTIMATE BODYWEIGHT STATION

10 different workout stations in one. This combination package offers a superior street workout and calisthenics experience, featuring all essential elements for users to release their creativity.

PARALLEL BARS

Parallel Bars can be found in every street workout area to train the upper body and core stability. The rounded corners make it easy to swing the legs across the Parallel Bars, making it safe to try new tricks without the risk of injuries.

INSPIRED BY EXPERTS

Designed for fitness enthusiasts

 Street workout and calisthenics are increasingly popular. The disciplines are gaining a foothold especially with young people, creating a need for street workout and calisthenics equipment in schools, parks, and

even on street corners. The new KOMPAN Street Workout & Calisthenics solutions offer numerous exercises in one structure, using a very small footprint and fit into areas where space optimization is key.

Combi products

The Street Workout products are inspired by experts and designed to motivate both professionals and fitness enthusiasts.

The series consists of various combination packages, offering a complete street workout and calisthenics experience with a very small footprint. These products offer a huge variation of exercises in a small space and for a small investment.

Standalone exercises

All exercise stations for street workout are available as standalone products. The benefit of these stations is that users can move freely around the product without being hindered by other elements. This will inspire the users to create wild movements.

Products are made from steel and are extremely durable so that they can last for decades in even the toughest surroundings.

Up and down the stairs

Stairs can be tricky for aging people. Training to walk safely on stairs is of pivotal importance. The Stairs Solution comes in different difficulty levels. The inclination varies, as does the amount of support from the hand support bar.

Get safely on the bus

The reactive Balance Board trains response and balance on unstable surfaces. In everyday life, it could be getting on a bus or walking on a slippery surface.

STAY FIT, BE MOBILE, AGE HEALTHILY

With mobility and rehabilitation training

As we advance in life, physical mobility is vital for us all. We need to keep our body mobile and our minds healthy. KOMPAN Stay Fit is designed to promote active and healthy ageing and to make injury rehabilitation available outdoors in the public space.

The KOMPAN Stay Fit portfolio offers a range of training stations, each providing funda-

mental skills training. Each station is inspired by activities and obstacles people meet in everyday life. Improving on basic mobility skills is important throughout all stages in life, making KOMPAN Stay Fit relevant for all user groups.

GOOD BALANCE AND STRONG ANKLES

The four exercises in the Balance Station have different difficulty levels. The placement of the four stations around the ring invites social interaction.

TESTING ABILITIES

This station is targeted towards executing the "Sit & Rise" and the "Up & Go" tests. The rail in the middle and the round handle at the turning point provide extra safety and support if needed.

PREVENT FALLING

The Surface Challenge is designed to prevent the elderly from falling, by giving them a safe opportunity to practice walking on surfaces and obstacles found in everyday life.

Fall prevention and balance

The Stay Fit product line consists of a range of tools to improve balance, strength, and mobility. The products are designed with safety and ease of use as high priorities, specifically targeting user groups with reduced capacity, such as active agers or people rehabilitating from an injury. Fall prevention and balance training is very important for aging people, but it is also highly relevant for people re-learning walking skills after moderate or serious injuries.

Surface Challenge

The Surface Challenge mimics the typical fall-causing obstacles found in everyday life. With the double rails it's possible to exercise the necessary fall-prevention skills in a safe and controlled environment.

Reactive Balance Board

The Reactive Balance Board is one of the most efficient ways to do balance training. The body needs to be balanced, while reacting to the moving surface. The double rails make balance training very safe, and with four touch-signs on the posts, a large variety of different exercises can be performed.

STAY FIT

Functional & flexible for every space

The Stay Fit products, which focus on the development of strength and coordination, are all created with just one central post that combine two training stations, resulting in a very high functionality per square foot. With just a few products and a limited budget it's possible to create a workout which is high on functionality.

One powerful combination is the FSW238. It combines the two most used strength exercises: the pull-up and the leg-lift exercises. It can also be used for triceps exercises on a few square feet.

OBSTACLE COURSES

Climbing

For easy access, climbing grips and step-ups can be used. The experienced user will try to overcome the 8 foot challenge without any help. Climbing is not only a physical exercise! It's also about overcoming the fear of heights.

Jumping

Jumping is a great exercise, as it improves strength, agility, bone density, and is an excellent calorie burner.

OVERHEAD ACTIVITIES

Overhead activities test upper body strength and coordination.

BALANCING

Balancing strengthens the muscles that helps keep the body upright, as well as leg muscles and core.

CRAWLING

Crawling is a great exercise that improves cross-body coordination and core strength.

CHALLENGING PHYSICAL TRAINING

For both beginners and trained athletes

Obstacles courses have their origin in military training. However, already in the 1970's they found their way to the public parks where everyone could enjoy them. Nowadays, Obstacle Course Racing is one of the fastest growing outdoor sports, attracting people

of all ages and abilities. It challenges and develops both mental and physical strength. Different ways of doing the exercises provide different difficulty levels, and make it work for both young and old as well as strong and untrained.

OBSTACLE COURSES

Challenging all

The KOMPAN obstacle courses are designed in a way that challenges everyone at their own level. Smart step-ups and extra grips will make it easy enough for beginners to get started on the equipment, and due to its size and height, even the most advanced athletes will find a way to challenge themselves!

Obstacle courses in a natural style

The KOMPAN obstacle courses are designed in a way that challenges everyone at their own level. Smart step-ups and extra grips will make it easy enough for beginners to get started on the equipment, and due to the size and height of the equipment, even the most advanced athletes will find a way to challenge themselves!

Robinia wood is a very strong and long-lasting material with high levels of natural oils. Thus, Robinia wood make durable outdoor fitness areas which are close to maintenance-free and can last for decades.

Steel colors

14 thrilling colors are offered in the standard assortment.

POWERFUL DESIGN WITH COLORS

Create an individual expression

Distinct visual and creative expressions can be made by adding special colors to the steel parts of the fitness products.

Different colors can be chosen to make a statement, or to support and highlight an

overall design theme, an aesthetic approach, the surroundings of the fitness site, or even to represent a specific brand or a corporate identity. Only the imagination sets the limits.

** The color is available as matt or glossy

BRIGHT OR REFRESHING

Awesome-looking fitness solutions can seem even more impressive in bright yellow or a refreshing light blue color.

DESIGN AND COMFORT

The design of this fitness site is made as an integrated concept and with a type of surfacing that gives the maximum comfort during workouts.

UV AND WEATHER RESISTANT

A special type of UV- and weather-resistant paint is used to apply the symbols and markings on the surfacing. For easy and accurate application, KOMPAN has designed a selection of template tools.

surface

FUNCTIONAL SURFACING WITH POUR IN PLACE

With high-quality wetpour surfacing solutions, designers can be very creative. Different colors, shapes, and graphics can support and highlight the overall design theme and also extend the functionality of the equipment to the surface.

From a safety perspective, a wetpour surfacing solution from KOMPAN provides brilliant shock absorption. And from an operational point of view, it provides a clean and comfortable surface with very low maintenance costs.

The soft yet firm surfacing is highly inclusive, making it possible for wheelchair users to easily access the fitness site.

SYMBOLS AND MARKINGS

Sets of symbols and markings painted on the surface optimize the use of the available site area. The patterns create specific areas for functional training based upon the graphic references on the floor.

design

MULTI-SPORT

■ ■ ■ In larger cities, there is always a lack of space and many city centers have not been designed for an active lifestyle. There is often car, bike, and pedestrian traffic which can pose a hazard when sports are added to the mix. Luckily, there is a growing willingness to create spaces where children and adults can engage in ball sports and other activities. This Multi-Use Sports Area (MUSA) is the

perfect solution for a densely populated area because it is tall and fully enclosed, which ensures that all balls stay within the court. Secondly, it has an open and transparent design, making it easy to see what is happening on and off the court without obstructing views. MUSA is a compact integrated system that offers a huge amount of functionality in a safe and enclosed environment.

FRE600201 MUSA, 39 x 79 ft, Steel, 16 ft Walls, Rectangle

Public parks are now widely popular and attract a huge variety of people. Some of them come to relax, read a book, or simply enjoy the green areas. Others come to meet people and be active. Sometimes these different uses can create friction, like children running through a picnic chasing after a ball. This can easily be prevented by creating active and non-active zones in a park and a Multi-Use Sports Area (MUSA) is a great way to deline-

ate these zones. It's designed to simply keep the ball inside the court and to facilitate many different sports.

By choosing the Wood Plastic Composite panels, the MUSA blends into the park environment while at the same time be maintenance free. The lifetime warranty on steel structural components is important because the site is designed to be heavily used and enjoyed by many!

Minor regional deviations can occur due to differences in safety standards

PRODUCT INFORMATION

Product number	Product name
1	Configured Multi-Use Sports Area
2	Robinia Obstacle Course
3	PAR1011 Rumba Table, Round, 4 ft 3in
4	PAR1006 Rumba Bench, Curved 90°

Here we have an action-packed solution that functions as a fully-fledged extension of the university's indoor training facilities. The MUSA is centrally located where basketball, soccer, handball, and hockey can be played. The bottom row of panels is completely flat and closed. This ensures that the ball bounces back fairly and the game is not interrupted. The higher panels are transparent so that spectators can follow the matches and the ball stays on the field.

Outside the MUSA, the entire area is equipped for recreational sports. There is a place for everyone to work on an active lifestyle. The circle fitness area provides room for group training or individual workouts to improve strength and endurance. Adding a running track has also proven to be a good addition in an active space like this one, especially if it also connects to an obstacle course, which provides extra challenge and a lot of fun.

Life in the suburbs is all about families and you will find a wide range of ages, abilities, cultures, and professions. In such a diverse area it can be challenging to create a common space that makes the neighborhood active and attractive. A Multi-Use Sports Area (MUSA) fits right in, as it combines play,

sports, and fitness. It brings the family and the neighborhood together through playing basketball, handball, or soccer. The field can be used as a full court or easily be divided into several play areas so that multiple games can take place at the same time.

4	FAZ30200 Step, 16 in
5	FAZ30300 Step, 24 in

A KOMPAN Multi-Use Sports Area (MUSA) is designed as a flexible system to fit any purpose or environment. The intelligent design allows the MUSAs to host a variety of games such as soccer, basketball, hockey, volleyball, tennis, badminton...the list goes on. Ball sport areas in schools are popular. Teachers and children are enthusiastic about them. The teachers unanimously say that the fields have meant more physical activity with fewer conflicts during breaks.

The fields also increase concentration and willingness to learn for children in the classroom. And the children? They are extremely happy to have what is their right – an open invitation to fun and play! The sides of the MUSAs will keep the ball in play, thus intensifying the game as there are fewer involuntary breaks. At the same time, children not playing in the MUSA won't be disturbed by stray balls escaping the play area.

MULTI USE SPORT AREAS

Multi-activities – the ball's in your court

From the moment the Aztecs and Mayans discovered a latex that formed into a bouncing spherical object, ball games have been part of life. That's 5,000 years of searching for the perfect place to play. The games vary as much as the balls and surfaces, but they all evolved to get the most competitive fun out of the experience.

The perfect place to have that experience is in a MUSA, KOMPAN's Multi-Use Sports Area. As the name suggests, the venue is open to play forms of established sports like soccer, basketball, tennis, and hockey, but, excitingly, it's also a perfect place to invent variations. It's where the rules are not necessarily written but most certainly agreed. The only common rule is to have healthy fun. The MUSA is to sports what a convenience store is to shopping. It provides an optimized arena, a focal point for activity, somewhere specifically designed to satisfy a need. In rural or urban areas, these compact stadiums are an important social asset, a tool to create a healthy and engaging community.

Player-friendly experience

The Cosmos Multi-sport puts a slight twist on the play area. Coming in five sizes, the octagonal shape remains the same, and using HDPE boards makes life easier for the younger players. The High Density Polyethylene Sheets are a forgiving surface for any wayward shot, keeping the ball in play, and since there are no corners, the action constantly flows. In addition, the goal areas are narrower at the top than the base, encouraging ground-level play, reducing the need for goal-keepers and again keeping pace with the fast and furious action.

Kick-about games are great for social interaction, competitive yet fostering friendships, and promoting active and healthy lifestyles. The Cosmos, like the rest of the Multi-sport range, is an open invite for passing children to stop and ask, 'Can I play?' A basketball hoop at the correct NBA height hovers temptingly above the goal, so there's a choice of sporting activities.

HIGHEST QUALITY MATERIALS

Engineered to last

Nothing lasts forever. All outdoor fitness locations face the trials of weather, use, and abuse, and will eventually succumb to the ravages of time. That day can be postponed

for a lifetime by using the finest of materials and the cleverest of designs. Quality costs, but quality also lasts. A simple equation that in the fullness of time pays dividends.

PANELS

PANELS are made of EcoCore™ which is a highly vandalism-resistant material and a highly durable and long-lasting material that gives you an outdoor fitness site that will look good for decades. Additionally, EcoCore™ has maximum UV protection that prevents fading in the sun.

POSTS

MAIN POSTS are available in three different materials giving you the opportunity to select your preferred look and quality: 1. Impregnated pine wood with in-ground steel footings. 2. Galvanized steel with powder-coated top finish. 3. Color-anodized lead-free aluminum. All post types are designed to provide long lifetime and low maintenance.

FLOORS/DECKS

All DECKS are supported by uniquely designed aluminum profiles with multiple attachment options in order to give you a highly customized outdoor fitness site with your favorite activities. The HPL decks come with a thickness of 18mm, a very high wearing strength, and a unique KOMPAN non-skid surface texture.

GALVANIZED STEEL

Our STEEL surfaces and steel frames consist of a hot-dip galvanized inside and outside with lead-free zinc according to global safety ISO standards for outdoor fitness equipment. The galvanization has excellent corrosion resistance in outside environments and is maintenance free.

ROPE

ROPES come with galvanized six-stranded steel wires and a steel core, impossible to wear through. Each strand is tightly wrapped with PES yarn, which is melted onto each individual strand, making the ropes highly wear and vandalism-resistant.

ROBINIA WOOD

Robinia wood is a very strong and long-lasting material with a very high level of natural oils. Robinia wood makes very durable outdoor fitness sites which are nearly maintenance free and able to last for many years.

WARRANTY

We have industry-leading warranties

LIFETIME* warranty

- Hot-Dip galvanized parts
- Stainless steel parts
- EcoCore™ and other high-density polyethylene (HDPE) parts

15-year warranty

- High-pressure laminate (HPL) parts
- Aluminum parts

10-year warranty

- TexMade™ posts
- Pre-galvanized posts with painted top layer
- Painted surface on galvanized or aluminum metal parts
- Electrogalvanized metal parts
- Molded PP decks
- Solid plastic parts
- Hollow plastic parts
- Transparent Poly Carbonate (PC) parts
- Wood-plastic composite (WPC) parts
- Robinia, ash, pine, and other wood types
- Stainless Steel Slides
- Rope and net constructions

5-year warranty

- Resin coated plywood parts
- Springs and ball bearing assemblies
- Graphic print on transparent PC panels
- Concrete parts
- Galaxy Connection Balls

2-year warranty

- Moveable plastic & metal parts
- Rubber membranes
- Screens and electronic parts
- Sunshades & sail solutions

* KOMPAN's LIFETIME warranty is in effect for the lifetime of the product until the product is uninstalled and/or taken out of use. In addition, KOMPAN's general terms and delivery conditions apply and supplement this warranty.

WARRANTY COVERAGE

This warranty applies to KOMPAN's products for the time periods described for each product type above and with the limitations described in this warranty. The warranty period applies from the date of purchase by the first customer. This warranty covers only defects in materials. KOMPAN's liability under this warranty is limited to repair or replacement of defective products, without charge, at KOMPAN's discretion. Defective electronic components will be delivered and changed by a KOMPAN ICON Professional installer free of charge.

PROPER INSTALLATION AND MAINTENANCE

The warranty only applies if KOMPAN's products have been installed according to the instructions provided by KOMPAN and maintained correctly according to the KOMPAN Maintenance Manual. All warranty claims shall be accompanied by full documentation for proper installation and maintenance. The warranty for the ICON electrical components is dependent on those products being installed by an ICON-trained and approved installer.

WARRANTY EXCLUSIONS

This warranty does not cover any damage caused by accident, improper care, negligence, normal wear and tear, surface corrosion on metal parts, discolored surfaces and other cosmetic issues or failures due to misuse or vandalism. Natural changes in wood over time are considered cosmetic issues and are not covered.

NEAR WATER INSTALLATIONS

Products installed in direct contact with chlorinated water or saltwater (waterparks), or products installed within 650 feet from the shore are not covered by the KOMPAN warranty for any defects caused by corrosion. Specially designed products (handled via department for customized products), provided they have been upgraded to corrosion class C4 prior to delivery, installed within 650 feet from the shore (and not in direct contact with saltwater/spray of saltwater or chlorinated water (e.g. waterparks)) shall, subject to the applicable warranty period for each product type set out in the general warranty, be covered only against structural failure caused by corrosion (excluding moving parts) and under no circumstances for any period longer than 5 years.

THIRD-PARTY SUPPLIED PRODUCTS & SERVICES

KOMPAN provides non-KOMPAN branded products and installation services performed by certified third-party suppliers. This general KOMPAN warranty does not apply to such non-KOMPAN branded products and installation services, which may carry their own warranties. KOMPAN will pass on information on such warranties where possible.

FREIGHT AND WAREHOUSING

Global transport and logistics arranged by Kompan appointed forwarder. Products/items are not to be stored outside waiting for installation and must be kept dry at all times.
