ATTEND
THE ROBOT ROADSHOW

HOST
THE ROBOT ROADSHOW

Knightscope is on a long-term mission to make the United States of America the safest country in the world and has deployed its crime-fighting Autonomous Security Robots (ASRs) on a U.S. tour to show you how! The Robot Roadshow is a hybrid physical and virtual event where Knightscope technologies are made available for people to experience in a fun, interactive and in-person format. A short video of a past event hosted by the Los Angeles Police Department may be viewed [here](#).

ATTEND THE ROBOT ROADSHOW

Visit this space-age, NASA-like “pod” and experience all the technology that is enabling these robots to help make sites from Hawaii to Rhode Island safer today. Each Roadshow landing is virtually attended by a Knightscope expert, and visitors will be able to interact directly with each of our ASRs and see the Knightscope Security Operations Center (KSOC) user interface in action. These best-in-class security solutions provide additional eyes and ears that augment security programs to improve public safety and reduce security spend. Clients, investors and the media are all welcome to attend to learn more at each location. Robot Roadshow landings are typically held from 10:00am – 2:00pm local time, but times vary based on the venue. There is no charge to participate in or visit the Roadshow and available slots fill up fast, so RSVPs are recommended. Visitors may review upcoming Roadshow landings and sign up for an appointment [here](#).

HOST THE ROBOT ROADSHOW

Forget having to drive to another venue – host the Robot Roadshow at your location! We are planning to hit as many major cities as we can. If you would like us to consider your site for a landing, we’d love to hear from you. Volunteer to host the Robot Roadshow by filling out the Host Form [here](#).
