

MOBILE COMMAND CENTER

3 WORKSTATIONS, AWNING, SPACIOUS INTERIOR!

OVERVIEW

The vehicle features a Ford Transit 350 high roof chassis with a 3.5L V6 gas engine and a 10-speed automatic transmission. We integrated a complete emergency lighting and siren package including front grille lighting. A Draw-Tite trailer hitch receiver was also installed on the command center. Custom black powder coated running boards were added on the driver and passenger sides as well. Inside, the command center has three workstations, each with a 32" display monitor and spider base task chair. We custom fabricated aluminum box pan shelving for gear and finished them in durable gray powder coat. Lighting throughout the vehicle is bright and efficient LED. We also prewired the vehicle for the customer's communications radios (2).
