

## SMARTSIGNS

### Web Based Digital Sign Solutions for Education

MyVRSpot's SmartSign digital sign solution is completely web-based and specifically designed for schools and school districts. Authorized users are able to easily control the content to be displayed on monitors throughout the buildings, including videos, images, and URL links.

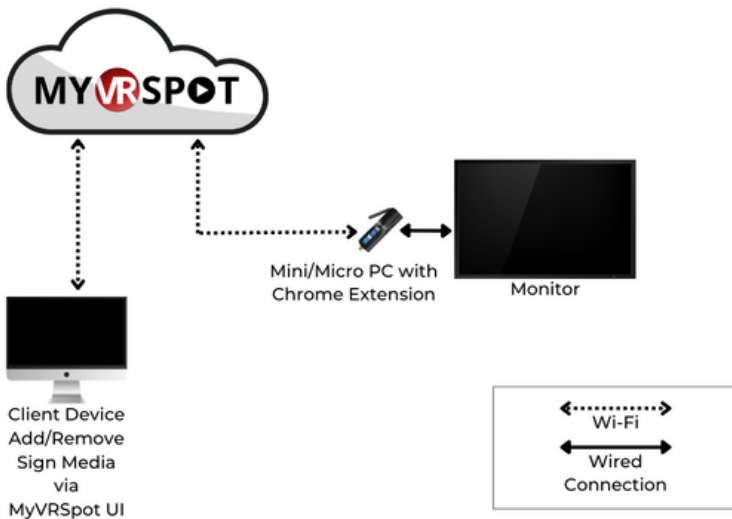

The SmartSign solution utilizes our custom-built Chrome Extension, and as such, the digital sign content can be viewed on any monitor connected to a device running the Chrome browser and Chrome extension. By utilizing the Chrome extension, district bandwidth usage is minimal, as media is saved to the local drive of each device.

For those districts looking to mirror content from a single computing device to display on multiple monitors, we have several network-based packages to choose from.

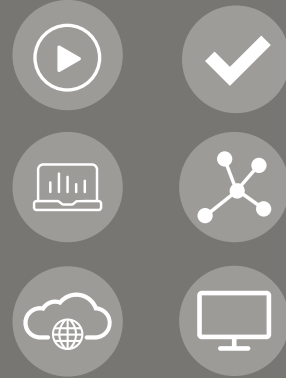

### One Device to One Monitor Solution

MyVRSpot's "One Device to One Monitor" sign solution is designed for those schools and districts running individual monitors throughout the building, such as at the front office, in the cafeteria or as an overflow for the auditorium or gymnasium.

As you add or remove content using the MyVRSpot web interface, that content is automatically pushed to each connected device and stored on their local drive. Media is then displayed and will loop all content in the media feed. Those media items are then displayed from the local drive, eliminating the need to maintain a constant internet connection. This process not only saves the network from unnecessary traffic, but ultimately saves the district money.

### KEY FEATURES

Display videos, images, and URL links

Connect your Live Broadcasting Channels to appear on any SmartSign

Remotely upload and update media from any device

Schedule items to appear immediately or at a later date/time

Multiple feeds for quickly changing between media libraries

### SYSTEM REQUIREMENTS FOR ONE MONITOR SOLUTION

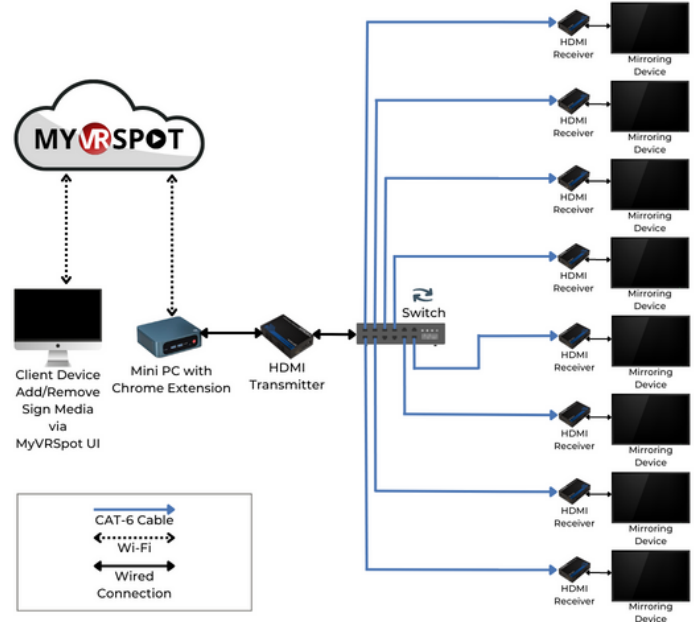

- Windows or MAC OS
- Desktop, Laptop, Micro PC
- 2GHz processor
- 2GB of RAM
- 32GB Hard drive
- Chrome (88.0.4324.104 or newer)

## Enterprise SmartSign Solution

If you are looking for a more robust digital sign solution that will mirror your sign media over your network instead of via local drives, our network based solution might be just what you are looking for. The network option allows you to mirror a SmartSign and its content to either four (4) or eight (8) monitors in your building. Easily extend the HDMI audio-video signal from a computer to remote displays via CAT-6 Ethernet cables. Using a single computing device, Windows, MAC, or Chromebook, a HDMI transmitter, switch, and receivers at each monitor, you are able to stream videos and images to each connected monitor.

## SmartSign Purchase Options

The purchase of SmartSigns can be customized based on the number of devices, digital signs, and Live Broadcasting channels needed. SmartSigns can either be purchased as a bundle with MyVRSpot accounts, or can be purchased based on any of the packages below. Add-Ons that are also available for purchase include: Micro PCs directly from MyVRSpot; Pre-configuration of hardware with your SmartSign and Live Broadcasting channels; and Onsite setup and training. Ask your Sales Rep for more information.

### Micro PC Package

This package includes: Up to 10 MyVRSpot accounts for sign management; Three (3) BYOD connected devices; (1) Live Broadcasting channel integrated into your SmartSign(s); and automatic Closed Captioning of all digital sign video and audio files. **Hardware Add-On:** We can provide three (3) Micro PCs with Windows 10 Pro, including a 1-year full warranty.

### Enterprise SmartSign: Four (4) Displays

This package includes: Up to Ten (10) MyVRSpot accounts for sign management; One (1) 4-port HDMI Transmitter; 4 HDMI receivers; One (1) 5-port network switch; One (1) Live Broadcasting channel integrated into your SmartSign(s); and automatic Closed Captioning of all digital sign video and audio content.

**Hardware Add-On:** We can provide One (1) Micro PC with Windows 10 Pro with two (2) HDMI ports; including a 1-year full warranty.

### Enterprise SmartSign: Eight (8) Displays

This package includes: Up to Ten (10) MyVRSpot accounts for sign management; One (1) 8-port HDMI Transmitter; 8 HDMI receivers; One (1) 16-port network switch; One (1) Live Broadcasting channel integrated into your SmartSign(s); and automatic Closed Captioning of all digital sign video and audio content.

**Hardware Add-On:** We can provide One (1) Micro PC with Windows 10 Pro with two (2) HDMI ports; including a 1-year full warranty.
