

PEST CONTROL REDESIGNED

Remote rodent monitoring with PestConnect

What if you could combine the power of technology and data with expert pest control to pinpoint problems and resolve them quickly? **With Rentokil's PestConnect, you can.**

The PestConnect Portfolio is a suite of remote rodent monitoring devices that detect rodent activity, record the exact date, time, and location of activity, and trigger a prompt response from Rentokil.

With this data, Rentokil can deliver a more responsive, efficient, and effective pest control program. It's pest control – redesigned.

24/7 monitoring

Highly targeted response

Minimizes extra traffic in your facilities

Increases efficacy

Automatic documentation with PestNetOnline

Third-party audit compliant

The Experts in Pest Control

HOW IT'S DIFFERENT

To be done well, traditional pest management is time-consuming and invasive – and on top of that, any activity between your routine services may go unchecked unless reported.

With a redesigned program under Rentokil, your integrated pest management program stays in place, but we replace devices in high-risk areas with PestConnect devices. This ensures activity in sensitive locations is addressed quickly and reduces time spent on property.

EVOLVING TO MEET YOUR NEEDS

Your business doesn't stay the same – why should your pest management program? Over time, data from PestConnect devices can be used to optimize and refine your program and work with you to address operational gaps.

SEAMLESS INTEGRATION WITH PESTNETONLINE

PestConnect Portfolio devices integrate seamlessly with our PestNetOnline client portfolio, giving you access to all the data and details of your program.

- Robust data to help you make business decisions
- Comprehensive reporting suite includes activity, materials, trending, and more
- One location for all your program documentation
