Artificial Intelligence Suppliers

Automation Anywhere

Automation Anywhere utilizes Robotic Process Automation. This enables the organization with tools to create their own software robots to automate any business process. The "bots" are configurable software set up to perform the tasks assigned and controlled. Think of them as your Digital Workforce. Show the bots what to do, then let them do the work. They can interact with any system or application the same way you do. Bots can learn. They can also be cloned. See how they are working and adjust and scale as you see fit. It's code-free, non-disruptive, non-invasive, and easy.

DataRobot

DataRobot, the world's most advanced machine learning platform, automates best practice machine learning processes from data ingestion to deployment. Machine learning models that used to take weeks or months to build can now be generated in minutes – no coding or scripting required. DataRobot captures the knowledge, experience, and best practices of the world's leading data scientists, delivering unmatched levels of automation and ease-of-use for machine learning initiatives. DataRobot enables users to build and deploy highly accurate machine learning models in a fraction of the time it takes using traditional data science methods.

IBM

For more than a century, IBM has been a global technology innovator, leading advances in AI, automation and hybrid cloud solutions that help businesses grow. IBM software comprises a diverse array of solutions designed for businesses, such as AI-driven analytics, cloud computing services, cybersecurity tools, and industry-specific applications. These offerings aim to optimize operations, boost productivity, and foster innovation within the modern digital environment.
