

Via, Remix, and Citymapper: unified tech for dynamic transit.

End-to-end product suite to plan and operate digital, data-driven transit systems.

One integrated platform built to solve your biggest transportation challenges.

Remix

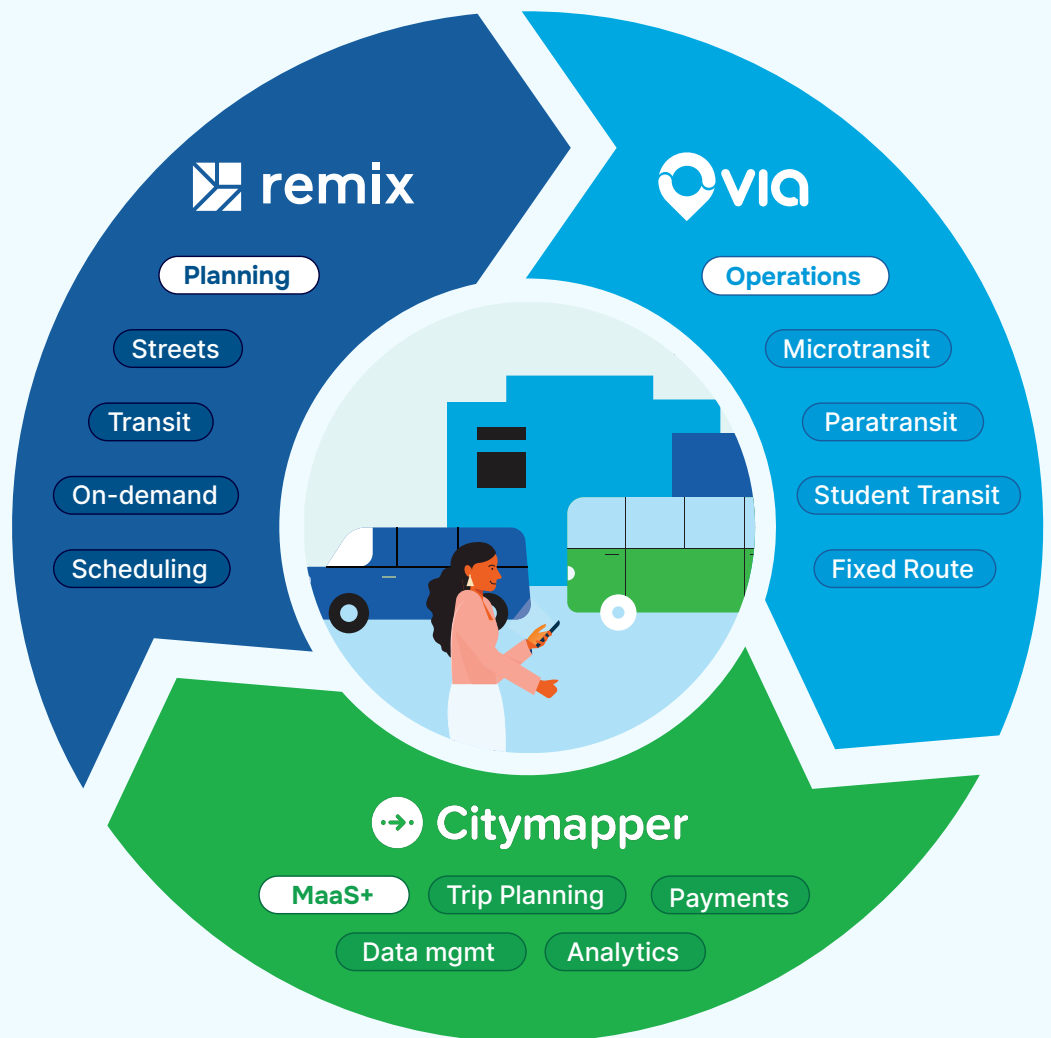

Comprehensive, collaborative, presentation-ready planning and scheduling software.

Via

Intuitive software and tech-powered operations for efficient, future-proofed public transit.

Citymapper

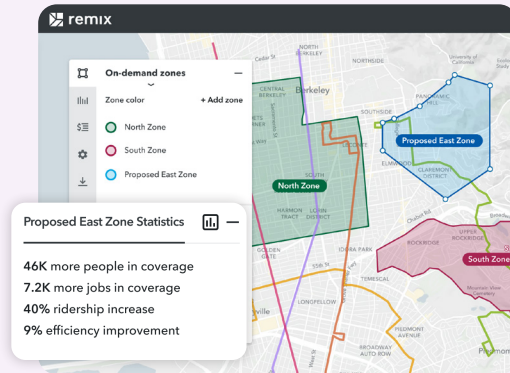

Award-winning journey-planning app for riders; transformative data and communications tools for transit providers.

How it all works together.

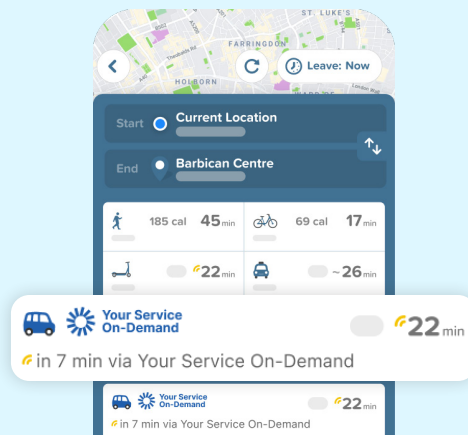

Via, Remix and Citymapper are powerful on their own, but make each other stronger when deployed together. See just a few examples below:

Visualize Via-powered service data in Remix...

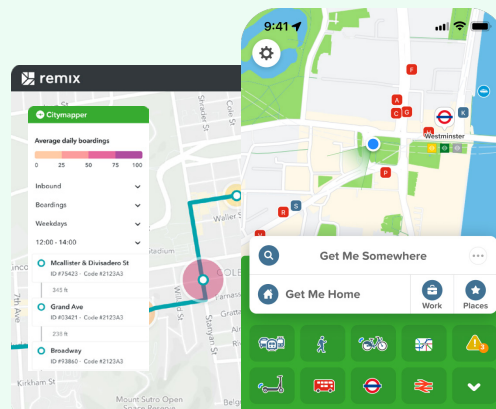

allowing you to easily identify opportunities to improve performance across modes.

Riders can plan, book and pay for Via-powered microtransit rides in the Citymapper app...

helping more riders discover microtransit by highlighting it in the same app they use to navigate your entire network.

Network-wide ridership insights from Citymapper are visualized and analyzed in Remix...

providing you unparalleled insight and recommendations about how to improve transit access and efficiency.

When you plan, operate, and optimize your network with Via you'll see...

- Better and more equitable rider experiences
- Higher efficiency across modes
- Lower costs
